

A rally is being held September 22nd 8:30 a.m. in front of the Jackson Federal Building, 2nd Ave. in Seattle, and other rallies are being organized for the same day in other cities (more news as they are confirmed).

These rallies are in support of GPS as a critical public resource, and to voice end user concerns over the proposal being considered by the FCC that could cause damaging interference for high precision GPS for end users like surveyors, aviation, construction, science, industry and public safety [aka the "LightSquared" issue].

The rallies are being spearheaded by surveyors and surveying associations; but other end user segments are pitching in, like precision agriculture, academia, aviation and public safety. This is purely grass roots about this specific issue with no other agenda.

Join in the rallies; if you would like to organize a rally for your local area (and there are federal buildings everywhere; especially look for the ones with FCC offices) then some materials have been prepared by the organizers of the original rally in Seattle; a sort of primer with a press release template; see attached files.
